

# SCALA vs. JAVA

1. Scala is a functional and object-oriented programming language. Only object-oriented programming is supported by Java.
2. In comparison to Java, Scala is less readable.
3. In contrast to Java, Scala does not support backward compatibility.
4. Whereas Java does not, Scala offers operator overloading.
5. In comparison to Java, Scala programs use fewer lines of code to create the same program.
6. Scala is less well-known than Java.
